

PRYDA FLOOR TRUSS SOLUTIONS

A FAST AND COST EFFECTIVE WAY TO CONSTRUCT A COMPLETE WORKING PLATFORM IN HOURS

Pryda floor truss systems are a fully engineered and compliant solution for residential and commercial projects. The prefabricated floor trusses minimise onsite cutting and the risk of rework and engineering issues if services installation compromises the structural integrity of the floor.

Reduce site supervisor call backs and rectification, minimising redesign and call back charges.

Cost-saving design optimisation and adaptable set-down heights to accommodate tiled wet areas.

No need to cut holes for service penetrations. Extra large holes can be designed into the web locations.

Simplify the installation process. No need to cut holes, no more sawing and hammering.

SAFER. FASTER. SMARTER. EASIER.
