SPEEDTRUSS™

**A better way to build a roof.
SAFER. FASTER. SMARTER. EASIER.**

pryda

SMART COMES STANDARD WITH PRYDA SPEEDTRUSS™

NOW YOU CAN PLACE YOUR ROOF
TRUSS, SWING IT OUT AND SCREW
IT DOWN. QUICK, SMART.

Safer

Reduced time working at heights.

Faster

Work faster with preinstalled
Hinge-Out and Easy-Fix components

Smarter

Pryda SpeedTruss™ is a smarter way
to install a roof – place, swing, screw
and everything just fits into place.

Easier

Stand each truss and screw
it down – job done.

A BETTER WAY TO BUILD

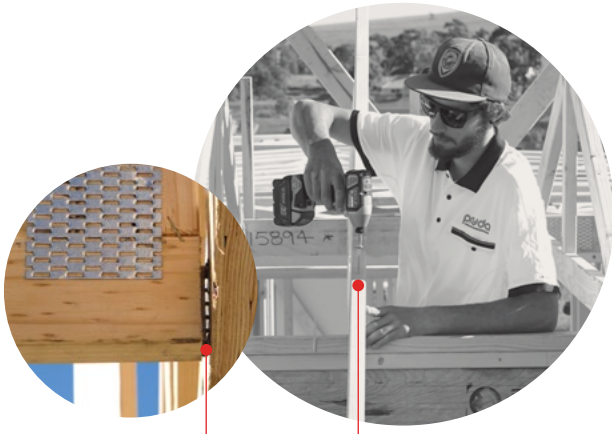

More smart thinking from the company that makes builder productivity its business.

Pryda SpeedTruss™ is a new approach to roof truss installation, enabling builders to work faster, easier, safer, and altogether smarter.

Roof installation systems don't come any smarter than Pryda SpeedTruss™

Hinge-out: Pryda's Hinge-Out system hinges the jack truss off the girder truss, ensuring the girder truss is immediately stabilised as you work. Each hinged jack truss is fitted with Pryda's truncated standard truss stop (TS Stop) for easy and accurate installation of a truncated standard truss.

Easy-Fix: Nothing beats a simple connection. Pryda's Easy-Fix pre-installed 150mm or 200mm screw makes short work of permanently connecting each truss to the wall frame top plate. Exclusive to Pryda, builders have a total system to simplify roof truss installation.

Pre-installed hinge

Pre-installed screw

PRYDA SPEEDTRUSS™

TICKS ALL THE BOXES

Work smarter, with fewer fiddly bits, and cleverly integrated tie-downs and assemblies for easy-as roof installation.

✓ SAVE A DAY'S WORK – EVEN MORE

Pryda SpeedTruss™ saves an entire day's work (based on the roof of a typical detached house). Pryda's truss assemblies minimise work on site while helping plumb and straighten girders automatically, saving even more time. No more temporary fixes, short-term bracing or final connections, such as multi-grips (subject to design criteria).

✓ ROOF TRUSS INSTALLATION, ONLY MUCH EASIER

Pryda SpeedTruss™ is like an assembly kit – everything just goes together. Position a truss, swing it out, and screw it down. Job done. Clever truss assemblies, including pre-installed hinges and pre-installed screw arrangements, reduce installation time by removing temporary fixing.

✓ WORK SAFER AT HEIGHTS

Pryda SpeedTruss™ components let you fix everything into place at or below the top plate – all from the safety of a step ladder. Position and stabilise girder trusses effortlessly, and permanently fix each truss the moment it's installed.

DON'T TAKE OUR WORD FOR IT

Here's what builders are saying about Pryda SpeedTruss™

“SpeedTruss is nice and safe – you’re up the ladder once, not double handling everything.”

“The hinge system is sturdy, especially when you’re getting started. It’s easy to walk through, too.”

“The whole system is almost error-free – just swing it out, screw it down, and it’s all done.”

“Never thought I’d see the day when I didn’t have to spend half of it doing tie-downs.”

“No more split bottom chords.”
